AP Classroom: Reviewing a Quantitative Analysis FRQ Video Assignment

What is Disciplinary Practice 3:D?

Needing to analyze charts, graphs, etc (quantitative data) → political outcomes and pattern explanations

How many total points is this QAQ worth?

4 points with 1 pt for each part

Fill in the table below while viewing the video:

Point A -	Identify or describe the information presented in the non-text stimulus.
Point B -	Describe similarities or differences in patterns and trends presented in the non-text stimulus
Point C-	Use specific data/evidence from non-text stimulus to present an accurate interpretation and application of relevant content.
Point D -	Explain how (relationship, pattern, or trend) or why (Analysis of motivation or reasons for relationship, process, pattern or outcome) the information connects to other course concepts.

Task Verbs: (fill in using your own words)

Identify: Point out/name something specific

Describe: To give a description of something happening

Explain: To provide reasoning why something is happening

Example of a quantitative term?

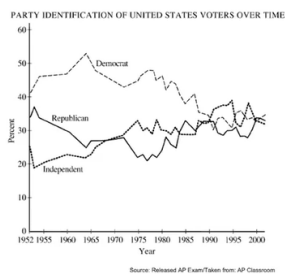

Voter turnout %, % of popular vote by candidate, etc.

What is the difference between a “pattern and a trend”:

Pattern → a general relationship in data that is repeated

Trend → Direction of change over time

Data Analysis Example: Add some annotations to this data- mark it up!

IN YOUR OWN WORDS, pause and respond to A,B,C & D while watching the video. Do not copy what is on the slides in the presentation.

A: The party identification exhibiting positive trends over time would be independent party, especially increasing over the past couple of decades from 1955

B: The percentage of people registering as Democrats and Republicans has grown to be increasingly similar in 2000 in comparison to 1952, with the difference seeming to be $<10\%$ in 2000 while the difference in 1952 is $>20\%$ between the 2 parties.

C: The spike of people registering to vote as Democrats could be due to the presence of the Civil Rights movement in the 1960s, allowing more minorities to vote Democrat.

D: An increase in the number of independent voters would be due to the increase in party polarization present in the US. People would increasingly rather choose to be independent and choose at the polls rather than become part of a certain party's voter base.

Final Reflection:

Compare your writing to the examples given in the video. What are some areas you need to improve on?

I need to increase my ability to make stronger connections to evidence in part D, as well as being more able to distinguish between the differences in patterns and trends.
